Abstract of JP11222420

PROBLEM TO BE SOLVED: To obtain cosmetic that has high ultraviolet-screening effect with excellent application sense and excellent retention of cosmetic effect and is resistant to whitening on bathing by using a specific powder and an ultraviolet-shielding component but no surfactant. **SOLUTION:** This cosmetic includes (A) an organosiloxane elastomer spherical powder particles, namely spherical elastic powder particles of three-dimensionally crosslinked polymer bearing organosiloxane skeletons preferably in an amount of 0.3-70 wt.%, more preferably 1-30 wt.%, (B) an ultraviolet screening component, preferably in an amount of 0.1-50 wt.%, more preferably 0.5-30 wt.%, (C) when necessary, other powders (pigments, colorants, resins), finishing oil, fluorine compounds, resins, antioxidants, thickeners, preservatives and the like so that it may substantially not contain any surfactant. In a preferred embodiment, the component A has a primary particle size of 0.1-20 μ m on the average. As a component B, an inorganic one may be used such as microfine particles of titanium oxide or an organic one may be used such as 2-ethylhexyl p-methoxycinnamate.
